Profile Summary

I have 4+ years of working experience Data Engineer. Fortunately, I had chances to work with client from Europe, Switzerland and US. I'm familiar with both Agile and Waterfall Methodologies.I believe that the real hands-on experience, the fast learning capability can lead to success.

Technical Skills

- Database: BigQuery, ScyllaDB, Postgres, Redis, Qdrant, MongoDB, SQL Server
- Programming: Python, Go, SQL, Scala/Java
- Data Engineering: Airflow/Cloud Composer, Dataform, dbt, Kafka (CDC), Spark, Delta Lake, Databricks
- Software Development: Git, Docker, k8s, Terraform, GitHub Actions, GitlabCI, Azure Devops
- Cloud: GCP, AWS, Azure
- AI & Agents: Claude Code skills, MCP servers, LLM tooling

Professional Experience

Cho Tot - Carousell Group HCMC, Viet Nam

Data Engineer Jan 2026 - Present

- **Responsible**
  - Maintain and extend a YAML-driven Airflow (Cloud Composer) platform that loads 50+ operational data domains into BigQuery, including CDC merge templates with automated schema evolution.
  - Build Kafka-to-BigQuery/ScyllaDB/Qdrant streaming pipelines on a Scala config-driven framework; added native Avro/Debezium CDC support and error-sink handling.
  - Improved reliability of Go sync services of the customer data platform (Kafka, ScyllaDB, Redis, Pub/Sub): self-healing backfills with checkpoint resume, TTL-based dual-write migration, fixes for rate-limit storms and ScyllaDB hotfixes.
  - Designed a BigQuery-to-ScyllaDB reverse-ETL service in Go with a Postgres-backed durable job queue, Avro snapshots on GCS, sampled verification and an operator console.
  - Built feature-store features in Dataform (SQLX) and fixed a crash-loop in the ScyllaDB SSTable bulk loader.
  - Built MCP servers for Airflow and the streaming platform and extended an internal MCP gateway (Go, protobuf); authored Claude Code skills that automate pipeline ingestion, fact modelling, bug diagnosis and release verification.
  - Provisioned GCP resources with Terraform (databases, buckets, service accounts) and automated team workflows with GitHub Actions.
- **Technical stack**: Python, Go, Scala, SQL, Airflow, Dataform, Kafka, BigQuery, ScyllaDB, GCP, Terraform

Axon Active HCMC, Viet Nam

Data Engineer 2025 - Present

- **Responsible**
  - Collaborated with clients from a Swiss insurance company.
  - Performed maintenance and refactoring of data pipelines.
  - Developed and implemented new commercial systems, as well as additional functionalities in existing systems.
  - Scheduled and managed daily Databrick jobs to process commercial data.
- **Technical stack**: PySpark, SQL, Deltalake, Databrick

PNJ Group HCMC, Viet Nam

Data Engineer 2023 - 2025

- **Responsible**
  - Conducting monthly systems review for optimizing and improvement.
  - **Cloud Migration**: Led the migration of commercial data from on-premise SAP HANA to AWS, enhancing scalability and reducing infrastructure costs.
  - **Customer CDP Integration:** Designed and implemented a scalable AWS-based ETL pipeline to automate customer data collection, RFM calculations, and reporting.

    * **Automation Toolkit for ETL & Power BI Tracking:** Besides the main task, I'd love to build some automation tools that tracking a metadata, utilize for ETL task , documentation auto-generator for dataset, reduced manual processing time by 80%

FPT Software HCMC, Viet Nam

Data Engineer 2021 - 2023

- **Responsible**
    * Implemented and managed microservice-based data pipelines on Kubernetes (k8s), ensuring scalability and reliability.
    * Designed and developed Technical Specification documents to ensure clear communication and alignment across teams.
    * Supported bug identification and resolution in UAT and production environments
    * Built automation tools for data analysts, streamlining repetitive tasks and improving team productivity

Highlight Project

Customer Loyalty Data Pipeline

Developed and Deployed Data Pipeline for Customer Loyalty System

- Responsible
    * Developed and maintained an automated CronJob for incremental data extraction, ensuring efficient and timely updates to customer loyalty data.
    * Extracted and processed data from multiple sources, transforming it for analytics and reporting.
    * Designed and optimized data models to support customer insights, retention strategies, and loyalty program analytics.
    * Managed deployment and orchestration using GitLab CI/CD pipelines and Kubernetes (K8s), ensuring scalability and reliability.
- Techstack: Python, Kafka Flask, GitlabCI, k8s, Granfana

CDP Data Platform on AWS

Implemented a serverless tech stack using Lambda, S3, and Athena for optimized performance and cost savings.

- Responsible
    * Led the migration of commercial data from on-premise SAP HANA to AWS, enabling improved scalability, cost-efficiency, and real-time data accessibility.
    * Implemented automated data validation scripts for ensuring data quality during the migration process.
    * Migrated 5TB of commercial data to AWS, adopting an event-driven architecture with AWS Lambda for real-time processing.
    * Designed a two-phase migration approach with parallel systems, ensuring no downtime and maintaining data integrity.
- Techstack: AWS Lambda, S3, Athena, Delta Tables, Event Streaming

Certifications

* [DP203] - Microsoft Azure Data Engineer Associate (2022)

Education

Viet Nam Nation University of Information Technology HCMC, Viet Nam

Bachelor of Information System 09/2018 - 11/2022
